

Transforming Analytical Learning in the Era of Big Data

An Undergraduate Summer Institute in Biostatistics

The University of Michigan

June 5—July 14, 2017

This full-time 6-week summer institute will introduce undergraduate students to emerging challenges at the intersection of *Big Data, Statistics, and*

Human Health. Lectures will be led by a diverse group of stellar biostatistics, statistics, electrical engineering, and computer science faculty at the University of Michigan. Working in teams, students will participate in mentored big data research projects. A stipend is available for successful applicants.

Application opens December 15, 2016
